

Colic/Ulcer Protocol

Written by Cindy Daigre

Observe the horse's symptoms:

- Is horse lying down, looking at belly, rolling, breathing hard, has the horse pooped, passed gas?

First Treatment:

- Mix 4 Nux Vomica homeopathic tablets, 1 ml APF, and enough Aloe to pull up in a 60 cc syringe and dose.
- Do not offer food except forage only (no grain, no treats)

Other Treatments:

- Aloe Vera Juice: 60 cc syringe 3x/day
- Half a tube Probios
- 4 Nux Vomica tab's can be given every 15 minutes for an hour if in acute crisis.
- Peppermint oil: rub on belly, allow horse to sniff and wipe onto gums.
- Peppermint and Chamomile are anti-spasmodic herbs. Brew a tea from each, allow to cool, and pull up in a 60 cc syringe and dose up to 3x day.
